

Baby Check-Up™

DOLL

Make her feel better again and again!

It's so fun to make your Baby Check-Up™ doll feel better. You can listen to her heart, and really hear it beating. Then you can take her temperature, and if there's a sad face you can give Baby Check-Up pretend medicine from her "magical" medicine dropper to make her feel better. Take her temperature again, and if you see a happy face you know she's feeling much better!

1 Put In The Batteries

The battery compartment is located in the back of the stethoscope. An adult should unscrew the screw with a Phillips head screwdriver, and open the compartment door. Insert one AA size alkaline battery (not included) as indicated inside the compartment. To close, place the compartment door back on and screw it closed.

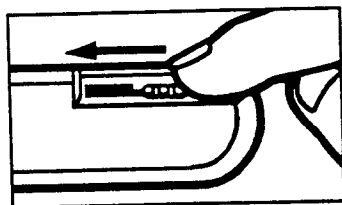

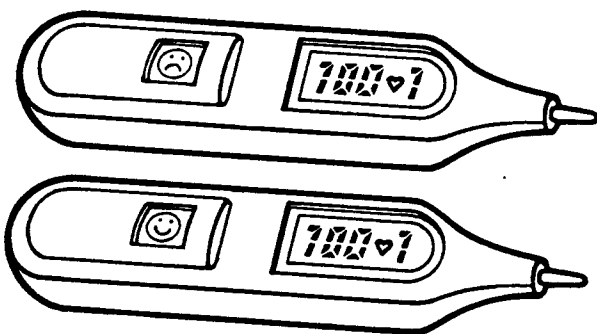

2 Check Her Heartbeat

Put the ear prongs of the stethoscope into your ears. Raise the ruffle on your baby's bib and press the stethoscope heart on top of the heart on her outfit. Hold firmly against the heart shape on the doll's chest to hear her heartbeat.

3 Take Her Temperature

Close the cover of the "thermometer" by sliding the button on the back. Press the tip against the baby's lips. If the sad face appears your baby needs her medicine. If the happy face appears your baby feels better.

4 Give Her The Medicine

Insert the "magical" medicine dropper into the medicine bottle. Squeeze the bulb slowly to fill the dropper. Keeping the bulb squeezed, press the tip against your baby's lips and then release. She's such a good girl, she takes it all! You can refill the dropper again and again to give your baby all the medicine she needs.
