## SEPTIC TANK™ INSTRUCTIONS

Remove all pieces from plastic frames If you have difficulty use safety scissors.

CONTAINS: Track treads, chassis, water-shooting cannon, turret, hose, canopy and label sheet.

- 1 Fit tab in front of black tracks into slot in front of red chassis. Snap chassis down onto tracks. (ILL. 1)
- 2 Snap green water-shooting cannon onto green turret as shown. (ILL. 2)
- 3 Fit tabs on green canopy into slot above seat and press until it snaps together, then swing down canopy front and snap into place. (ILL. 3)
- 4 Place turret into chassis and fit three tabs on turret into three slots in chassis and turn to face forward. (ILL. 4)
- oad water-shooting cannon, fit one end of orange hose into hole in cannon front end. Place other end of hose in container of water, then pull back plunger. Before firing, remove hose from cannon, then push plunger inward to fire water. (ILL. 5)
- 6 To reveal "battle damage" on cannon, squirt with ice water. To restore cannon to its original color, apply warm water. NOTE: Do not leave water cannon in sunlight, or in any other intense light, for any extended period of time. (ILL. 6)
