

# Juice 'n Cookies Baby Alive<sup>®</sup> DOLL

Ages 4 and up

*Dear Parent:*

*Juice 'n Cookies Baby Alive<sup>®</sup> is a very special doll. She actually eats, drinks and needs to have her diaper changed just like a real baby.*

*The consistency of the prepared food is time dependent. It takes approximately 3 minutes to set up before it is "hard" enough to be used as directed in the instructions. If the food is not used within 8 minutes of being made, it may get too rubbery for the doll to take bites of it, but it can still be cut up and fed to her in pieces. After 1/2 hour the food becomes too hard to be used and a new batch should be made.*

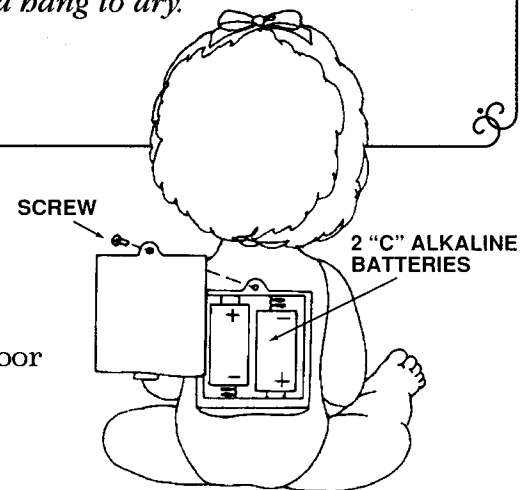

*When feeding Juice 'n Cookies Baby Alive<sup>®</sup> Doll, only use the special food included and only give her water to drink. Refill food set is sold separately. If she is accidentally given other food, clean her out immediately.*

*To clean Juice 'n Cookies Baby Alive<sup>®</sup> Doll, undress her and undiaper her. While holding her over a sink, feed her warm water from the juice box until it comes out of her bottom clean. Wipe the doll's face and body with a damp cloth. Wash her clothes in warm water and hang to dry.*

*Juice 'n Cookies Baby Alive<sup>®</sup> Doll should never be immersed in water. Her hair must not be washed.*

## BATTERIES:

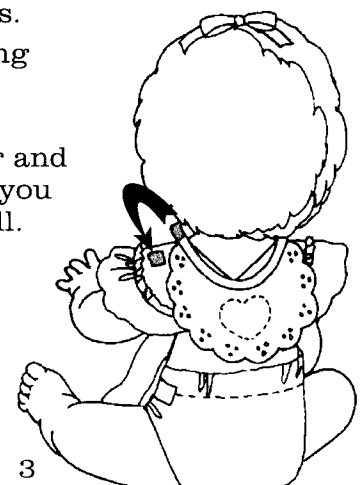

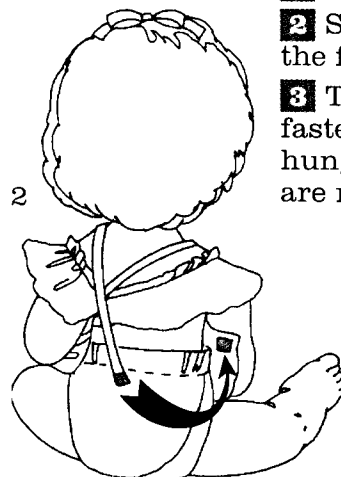

The battery compartment is located in the doll's back. Remove the screw using a phillips head screw driver. Remove the door and install two "C" alkaline batteries, as shown, then replace door and screw shut.

## DIAPER:

Your Juice 'n Cookies Baby Alive<sup>®</sup> Doll should have her diaper on before you feed her. Put the diaper on the doll the same way you would diaper a real baby. Make sure the side tapes are secure and the leg openings are tight.

A preemie size diaper fits the doll. You received two diapers with the doll. If you can't find more in a store, call 1-800-543-4932 to order by phone.

## DRESS AND BIB:

- 1** Now put on her dress.
- 2** Secure the dress using the fasteners as shown.
- 3** The bib should be fastened at the shoulder and hung on the back until you are ready to feed the doll.

**PREPARING THE FOOD:**

**1** Pour the contents of one food packet into the dish's mixing area.

**2** Using the spoon provided, add one spoonful of water. Using the spatula, mix the powder with the water until all the powder is dissolved.

**3** Once the powder is thoroughly mixed with the water, use the spatula to fill the selected mold(s). Use all the food mixture.

**4** Let the food set in the mold for three (3) minutes. While the food is setting, fill the juice box by squeezing it and placing the straw in water. Release the juice box to allow the water to be drawn into it.

**5** With the spatula, carefully lift the "food" from the molds. You can feed it to the doll as is or cut it into pieces with the cutter and feed it to her using the fork.

**FEEDING:**

Move the bib to the front of the doll. Lightly press the heart shape on the bib to the doll's chest. The chewing motion will begin. (Please note: the doll will make one complete cycle before she shuts herself off. One cycle consists of 6 sets of approximately ten chewing motions followed by a 20 second pause.)

Feed the doll during the chewing motions. Use the fork or feed by hand. Give her a drink during the pause. Place the straw in the doll's mouth and squeeze the juice box. Do not use the juice box to give the doll a drink while she is chewing.

Once the cycle is complete and the doll shuts off, you must lift or remove the bib and then press it to the doll's chest again to start the process over.

**DIAPER CHANGING:**

Lay the doll down and remove the diaper. Clean her bottom with a damp cloth. Put on a clean diaper.

**STORAGE:**

Make sure the Juice 'n Cookies Baby Alive® Doll is clean inside and out and has a clean, dry diaper on before putting her away.

**Kenner**
