

IMPORTANT LIGHTSABER TIPS

TIGER
ELECTRONICS, LTD.

This illustration shows the proper positions for the lightsaber in relation to Yoda. You will make better progress and have more fun when you follow these simple rules for the use of the lightsaber. Please refer to the main instructions for more details about lightsaber skills.

Remember, Yoda has to be able to “see” the lightsaber to be able to know what position it is in. Therefore do not swing the lightsaber over your shoulder or hold it under the level of the table.

It is important that when the lightsaber is in Section A it is pointing up and held in front of you. Do not point the lightsaber beyond vertical (do not let it point towards you).

When the lightsaber is in Section B it is important that the lightsaber be held parallel to the ground and in front of you.

When the lightsaber is in Section C, it is important that the lightsaber be held in front of you pointing down. Do not point the lightsaber beyond vertical (do not let it point towards you).

Therefore if a lightsaber skill requires that you move the lightsaber from the upper right to the center middle, you move the lightsaber from Section A to section B. If the lightsaber move requires that you move the lightsaber from upper right to lower left you move the lightsaber from Section A to Section C.

When you move the lightsaber between Sections it is important that you use smooth movements not jerky, fast movements. Also be sure to wait for Yoda to react to each move before proceeding to the next move.
