## HOW MORPHITS WORK

MORPHITS creatures change and morph right before your eyes by using 3 different sensors: Light, Touch, and Motion.

MORPHITS come in one of 3 main species - What kind of MORPHITS creature do YOU have?

- **Light Species:** These MORPHITS LIKE light!
- **Touch Species:** These MORPHITS LIKE to be touched!
- **Motion Species:** These MORPHITS LIKE to move!

In addition to the main species, some MORPHITS creatures may dislike light, touch, or motion.

**NOTE:** Listen carefully to your MORPHITS creature. They will make a happy noise when you give them the type of interaction that they like, or they will make an unhappy noise when you give them the type of interaction that they dislike.

Once you've discovered what species of MORPHITS creature you have, play with it and watch it morph right before your eyes! You're in control! Take charge, and watch what happens!

- If your MORPHITS creature likes light - cover the light sensor with your hand and then remove your hand to give it light!
- If your MORPHITS creature likes touch - press the touch sensor with your fingers!
- If your MORPHITS creature likes motion - shake it, spin it, and roll it around!

**NOTE:** When your MORPHITS needs your attention, it will chime and then freeze. When your creature is frozen, you will see a black frame appear around your creature. Press the A button to continue playing with your MORPHITS creature.
