## The Twistable Puzzle Of Creative Fun!

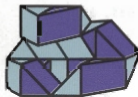

**RUBIK'S Transformable Snake** is the twistable challenge of unlimited puzzle shapes. Start twisting and watch amazing figures take form. Turn a snake into a swan. A bat into a ball. A turtle into a terrier. All with just a few twists of your imagination.

**RUBIK'S Snake** is the transformable challenge that sharpens your thinking about shapes and spaces. There are no limits to the shapes you can make, and **NO WRONG ANSWERS**. Try out the puzzles in this booklet, then twist up your own. **RUBIK'S Snake** is so addicting, you won't want to put it down!

**RUBIK'S Snake** is portable, long-lasting fun. It goes with you everywhere. Amazes and challenges your friends. Offers hours of play. It's the most popular snake in the world—the one that charms YOU!

## Meet RUBIK'S Transformable Snake

Untwist **RUBIK'S Snake**  
from its ball . . .

Ball

. . . Into a free-form shape

To do this, first note that **RUBIK'S Snake** is made of 24 triangles joined together. The end triangles are connected on 1 edge. All other triangles are connected on 2 edges.

Next, start by unwrapping Snake from its ball. The 2 end triangles are different colors and meet near the center of one side. Find them by tugging lightly on different sections of the ball. The Snake will begin to uncoil when you're tugging at the right pieces, so don't worry about breaking the puzzle.

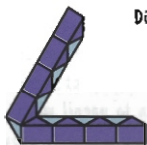

All the triangles can rotate  $360^\circ$  on their joints.  
Twist the triangles to form straight lines, angles,  
corners, switchbacks and cross-overs.

Straight Line

One twist on a straight line makes a diagonal bend  
to the side.

Diagonal Bend

Two twists on a straight line make a  $90^\circ$  angle.

$90^\circ$  Angle

All other bends are made by twisting from a straight  
line, a diagonal, or a  $90^\circ$  angle.

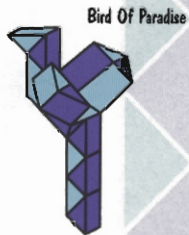

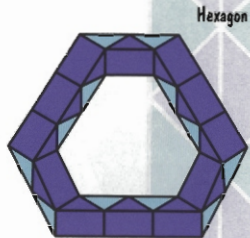

Switchback

## Twisting Hints

To make shaping easier, twist the unshaped end of **RUBIK'S Snake** out of the way as you work.

Stop twisting if you feel resistance from **RUBIK'S Snake**. Turning the triangles in the opposite direction may work more easily.

Do not force any twist or you will break the connection between triangles.

Do not pull triangles away from each other.
